

Acidic wheel rim cleaner with a three-acid combination for persistent dirt on wheel rims

This special product also removes problematic dirt like brake pad wear, dried mud or road dirt. In order to increase the efficiency, the flow properties were improved, the dirt is now infiltrated more effectively and removed more easily. The additional dis-persing effect means that the dirt is dispersed and removed more effectively and can be rinsed off with water more easily. The reduced rate of evaporation keeps the product fluid for a longer period and therefore also extends the period where it is chemically active.

Application / Dosage

Use approx. 20 ml of concentrate per vehicle.

Max. Exposure time

If the surface temperature is high, it is essential that the surface cools down. Do not allow the product to dry!

Available container types

Product properties

- acidic
- only approx. 20 ml consumption per vehicle
- pleasant characteristic scent
- for tough stains
- High creeping capacity
- Remains liquid and chemically effective on rims for a longer time
- with biological degradable surfactants and corrosion protection
- does not contain hydrofluoric acid, hexafluorosilicic acid or ammonium hydrogen difluoride

Technical data

- pH value: 0,2
- Density: 1,25
- Colour: light, clear
- Scent: characteristic
- Frost resistance: + 4 °C
