

Special product for flotation or sedimentation of dirt particles

With the help of polymeric components, the Dr. Stöcker flocculant forms particularly large, stable dirt particle flocs. This makes it very suitable for all plants that remove impurities from the water circuit by filtration or flotation.

Application / Dosage

Add undiluted to the water cycle via the dosing pump, so that a good mixing is guaranteed (e.g. in the chain chamber). Consumption approx. 10 – 15 ml of the concentrate per vehicle, depending on the degree of contamination.

Available container types

Can, 25 l
Art-Nr.: 657312

Product properties

- binds dirt particles in large flakes
- for easy removal of dirt particles
- for systems with filtration and flotation

Technical data

- pH value: 2,5
- Density: 1,21
- Colour: clear
- Scent: characteristic
- Frost resistance: + 4 °C
