

SP800 – pH-Regulator Special

Web: <https://www.dr-stoecker.de/en/products/water-treatment/ph-regulator-special-sp800/>

For adjusting the pH value in the service water

The pH Regulator Special is an indispensable tool for optimal water treatment. Reason: The flocculation and precipitation of dirt particles in the process water achieves the best effect in pH-neutral water (pH value between 6.5-8.5). Especially after plant cleaning with strongly acidic agents, the pH value must be balanced again.

Application / Dosage

Consumption depends on the pH value of the process water.

Available container types

Can, 25 l
Art-Nr.: 658412

Product properties

- regulates the pH level in the process water
- optimises the flocculation and precipitation of dirt particles

Technical data

- pH value: 13,8
- Density: 1,27
- Colour: light, clear
- Scent: characteristic
- Frost resistance: + 4 °C
